Pierre Derval

AI & Product Executive | Enterprise SaaS | AI-Native Engineering

dervalp@gmail.com · +32 498 05 76 56 · dervalp.github.io/dervalp/

EXECUTIVE SUMMARY

Product, engineering and AI leader with 20+ years of experience building and evolving enterprise software platforms. I connect product strategy, technical architecture, and delivery to turn complex technology into usable products.

Currently Head of AI at Vertuoza, where I created the Omni-loop AI-assisted engineering framework and brought AI Advisor and MCP capabilities into production with the Platform team. Previously led product and platform transformation at CluedIn.

SELECTED CAREER OUTCOMES — BEFORE VERTUOZA

- 80% customer adoption of new AI features within 6 months
- Time-to-AI-agent reduced from weeks to hours; installation/onboarding reduced from 3 months to days
- Multi-tenant SaaS platform delivered in 4 months (major PaaS-to-SaaS transformation)
- Supported large regulated enterprise contracts averaging ACV of 300k+
- Built evidence-based customer health scoring used across CSM, Support, and Product

CORE COMPETENCIES

- Product strategy & enterprise SaaS · Greenfield & brownfield engineering · Engineering leadership
- Production AI & agentic workflows · AI-assisted engineering · Product and engineering operating models
- Cross-functional execution · Delivery governance · Executive and board collaboration

PROFESSIONAL EXPERIENCE

Head of AI — Vertuoza, Belgium | 2026 – Present

B2B construction-management SaaS platform

- Lead AI initiatives spanning product, engineering, and platform architecture for a B2B construction-management SaaS platform.
- Created Omni-loop, a loop engineering framework for AI-assisted software development and iterative product delivery.
- Partnered with the Platform team to bring AI Advisor and Model Context Protocol (MCP) capabilities into production.

Chief Product Technical Officer — CluedIn, Brussels | 2020 – 2026

Enterprise data management & AI platform · ACV 300k+ · Regulated enterprises · 40-person org / 20 in engineering

Led product strategy, AI product development, pricing, and execution for an enterprise data platform serving complex and regulated environments.

- Owned product strategy and roadmap in partnership with the CEO, aligning platform evolution, market positioning, and commercial priorities.
- Led a multi-tenant SaaS transformation delivered in 4 months, reducing implementation time from around 3 months to a few days through automation and phased rollout.
- Built agentic AI workflows with Azure OpenAI and Ollama, introducing reusable deployment patterns, auditability, testing and rollback; reduced launch time from weeks to hours.
- Co-designed SaaS and AI pricing with Sales leadership; improved retention, onboarding and prioritization through automation, health scoring and AI-driven insights.
- Led hiring, performance management and operating rhythms across product, engineering, support and customer communication.

TECHNOLOGY & ENGINEERING

- Delivered AI capabilities — AI Advisor and Model Context Protocol (MCP) brought into production at Vertuoza with the Platform team
- Agentic systems — Azure OpenAI, Ollama, agent workflows, auditable deployment, testing and rollback practices at CluedIn
- AI engineering tools (hands-on) — Claude Code / AI coding agents, OpenRouter, Mastra, Inngest, E2B / Daytona, Turso
- AI-native development — Created Omni-loop, a loop engineering framework for AI-assisted software delivery
- Software & APIs — TypeScript, Node.js, React, Python, GraphQL federation, API architecture
- Cloud, infrastructure & data — Azure, Google Cloud Platform (GCP), Kubernetes, CI/CD, IaC, SQL, Elasticsearch, Neo4j

Principal Architect — Adform, London | 2016 – 2020

Drove cross-product architecture initiatives to improve UX consistency, front-end scalability, and API coherence across a complex enterprise advertising platform.

- Led a platform-wide initiative to unify UX and UI across product verticals, improving consistency and reuse.
- Established shared front-end architecture principles to improve maintainability, code quality and component standardization.
- Helped advance API unification across business units through GraphQL federation and clearer cross-layer data contracts.
- Supported the evolution of Adform FLOW toward a more unified and user-centric platform experience.
- The broader FLOW initiative later received a Red Dot award for interface and user experience.

Lead Developer — Sitecore, Copenhagen | 2012 – 2016

Built shared platform capabilities within Sitecore's innovation team to accelerate development and support its evolution from CMS to a broader digital suite.

- Helped build SPEAK, a front-end and back-end framework used to accelerate development of vertical applications across Sitecore.
- Developed reusable capabilities in .NET and TypeScript that improved consistency, maintainability and development velocity.
- Enabled internal teams and partners to build applications on top of a shared framework foundation.
- Worked with evangelists and development teams to drive adoption, developer experience and broader rollout.

VP Product Development — Amilia, Montreal | 2010 – 2012

- Partnered with Product, Sales and other teams to develop a SaaS application aligned with market needs and priorities.
- Led the development team across execution, delivery, hiring and team growth.
- Owned architectural direction of the web application, balancing scalability, maintainability and product evolution.
- Introduced technologies to improve product capabilities, service quality and efficiency.
- Built and structured the team to meet delivery commitments and support growth.
- Reinforced company culture and alignment through day-to-day leadership and communication.

Earlier Engineering & Leadership Roles — Brussels | 2005 – 2009

Aubay (AG Insurance) · Genivar · Experteam (BNP Paribas Fortis) · SME IT consulting

---

EDUCATION & LANGUAGES

- Master in Computer Science — ISIMS, Mons, Belgium
- French Native · English Fluent · Dutch Basic
